

Elective Focus Area in Mechanical Engineering

Energy and Environment

Revised 10/20/2017

The Energy and Environment (EAE) EFA provides advanced education in the increasingly important area of energy production, utilization and its environmental impact, with particular attention to emerging technologies. The EFA also provides a solid foundation in transport process modeling and an introduction to environmental engineering. Engineers working in this area must possess not only the fluid dynamics and heat and mass transport modeling abilities typical of mechanical engineers, but also a level of understanding of sustainability of engineered systems.
